Introduction The third-generation FLOW-3D solver FLOW-3D solves the incompressible Navier-Stokes equations and the momentum equations with variable density. The incompressible Navier-Stokes (INV) equations are used to model fluid motion, while the momentum equations provide the basis for a balance between mass and momentum. The density in the momentum equations is given by a so-called "source function", and FLOW-3D models this in a very intuitive and flexible manner. FLOW-3D solves the incompressible Navier-Stokes (INV) equations and the momentum equations with variable density. The incompressible Navier-Stokes (INV) equations are used to model fluid motion, while the momentum equations provide the basis for a balance between mass and momentum. The density in the momentum equations is given by a so-called "source function", and FLOW-3D models this in a very intuitive and flexible manner. FLOW-3D solves the equations on Cartesian meshes and is based on a finite volume method. FLOW-3D is a drop-in replacement for the legacy FLOW solvers (FLOW-1.0 and FLOW-2.0). It uses a configuration file for all aspects of the software, from the solver settings to the licensing system. FLOW-3D does not use any of the legacy FLOW model files. FLOW-3D allows the user to configure the software in a very intuitive manner to fit their particular needs and applications. It also includes the option to run the model on a single computer with automatic runtime and flow visualization (using VisIt). FLOW-3D includes all functionality of the legacy FLOW solvers, except for the model file format and the legacy FLOW environment, which are no longer supported by the FLOW community. The FLOW-3D license system offers a single subscription that allows FLOW-3D users to run the code on an unlimited number of computers simultaneously. It is licensed per user, per year and includes unlimited runtime. If FLOW-3D is run on a single computer, the runtime is only limited by the user's computer speed and memory. The FLOW-3D license system is both convenient and cost-effective for large engineering applications. The FLOW-3D setup procedure offers the user an easy and self-explanatory way to install 82157476af
